

Stephanie Liu

Product engineer with seven years of experience across front-end, data, and ML.

I build end-to-end, from user interviews to shipped UI, and I do my best work close to the people using what I make.

SKILLS

FRONT-END
TypeScript, React, JavaScript, HTML/CSS, Tailwind, Angular, Lit, D3.js, Vercel

BACK-END
SQL, Python, Go, C++, data pipelines & viz (Pandas, Plotly, BigQuery, Dataform)

DESIGN
Figma, design tokens, component architecture, prototyping, interaction design, UX research

AI
Claude Code, Codex, Cursor, prompt design, Paper

EDUCATION

Williams College
B.A. Economics & Computer Science, 2018
GPA 4.0 · Phi Beta Kappa · MIT EECS study-away

EXPERIENCE

UX Engineer · Google Feb 2025–Oct 2025

- Took engineering out of the loop for YouTube ad-format research studies — re-designed an internal prototyping framework so the 4–5 UX designers and researchers using it could build high-fidelity prototypes themselves.
- Built interactive YouTube Shorts prototypes for user research and shipped toolkit capabilities supporting 5–10 research studies.

Lit · TypeScript · CSS · Figma

Software Engineer · Waymo Nov 2022–Feb 2025

- Opened labeling to non-technical users — designed a self- and auto-labeling interface where labelers review and correct LLM-generated labels instead of labeling from scratch.
- Simplified a complex label-request workflow into a guided multi-step form for requesting teams, projected to let 70%+ of requests be made without engineering involvement.
- Partnered with the India labeling team to build a faster, more intuitive way for them to verify label accuracy and respond to feedback.
- Built the internal labeling platform used daily by 200+ labelers, delivering high-quality, low-cost datasets to Waymo ML teams; served as primary liaison between ML engineering and labeler teams.

Angular · TypeScript · CSS · C++ · Python · Figma

UX Research (20%) · Waymo Aug 2023–May 2024

- Interviewed riders and ran a 4-week pickup/dropoff diary study for the Waymo rideshare app in SF and Phoenix; analyzed and visualized results into a final presentation.
- Synthesized qualitative and quantitative rider feedback into actionable product recommendations for the rideshare app.

Colab · Python · Plotly · SQL

Analytics Engineer · Nuro Mar 2021–Oct 2022

- Owned Cost-Per-Mile monitoring scripts and dashboards referenced weekly by operations leads.
- Overhauled the org's pipelines and workflows in Dataform, with documentation that made data easier to analyze and debug.

Go · Python · JavaScript · Airflow · SQL · BigQuery

Software Engineer · Google Oct 2018–Mar 2021

- Built a logistic-regression model predicting display-ad callout quality to throttle low-value callouts — \$80M ARR; owned serving, pipelines, dashboards, and the TensorFlow model.
- Interviewed L3/L4/intern candidates, served on the Hiring Committee, and mentored an intern who joined full-time.

C++ · Python · JavaScript · SQL · Pandas · TensorFlow

PROJECTS

Baby Steps · baby-steps.stxphanie.com May 2026–present

- Designed and built a habit tracker for progress over months, not days: habits form slowly, and time off is fine. Used by a small group of friends.

React · Tailwind · Figma · Claude Code · Codex · Vercel
